

MULTIMEDIA ARCHITECTES is a young architectural office **founded in 2021**, engaged with private and institutional clients. In 2023 the structure has evolved into a Société anonyme to become **MULTIMEDIA ARCHITECTES SA**. It has since then managed new construction projects, interior and exterior renovations, from the feasibility study, to the construction site management until the handing over of the keys. All services are provided in **French, English and Italian**.

“**MULTIMEDIA**”, a word invented by architects of the Bauhaus and Surrealist movements, sums up our approach. Architecture is unusual in that it interacts with **all the senses**. We look, touch, hear and feel the space in which we are, in a word, we live it.

We offer architecture rooted in **its locus**, in resonance with **its time** and in accordance with **the needs and wishes of our clients** freeing itself from the current standardization of spaces.

Aware of the uniqueness and specificity of each project, and strong of our **experiences in Vaud, Valais, Bern and Geneva canton**, we do everything possible, including regular and thorough exchanges with the competent local authorities in order to ensure the project's success.

An architectural approach must also stay realistic as a real estate project is a long-term investment. This is why we, at MULTIMEDIA ARCHITECTES SA master and provide our services in **all project phases** from the first feasibility studies to the construction site management. This is how we can guarantee **a strict control over the financial aspects and the announced plannings** without impairing an optimal construction quality.

In the context of the climate crisis, we develop **sustainable constructions** that respect the environment. The choice of energy used to heat air and water, the choice of materials, their origin and their implementation are taken into account in all design phases of the project to provide **respectful and down to earth solutions**.
